Frequently Asked Questions about Intermittent Fasting on Reddit

What is Intermittent Fasting?

Intermittent fasting is not a diet in the traditional sense, but rather an eating pattern that cycles between periods of voluntary fasting and non-fasting over a defined period. It focuses on when you eat, rather than what you eat, although the quality of food remains important for overall health. The core principle is to restrict calorie intake to a specific window of time each day or week, allowing the body to enter a fasted state.

During fasting periods, the body's insulin levels drop significantly, which can promote fat burning. After a period of fasting, typically 12 hours or more, the body can deplete its glycogen stores and begin to access stored fat for energy. This metabolic shift is one of the primary reasons many individuals explore IF for weight management. The concept has gained considerable traction, with countless threads on Reddit dedicated to dissecting its mechanics and real-world application.

Popular Intermittent Fasting Methods Discussed on Reddit

Reddit communities dedicated to intermittent fasting are abuzz with discussions about various methods, each with its own set of adherents and anecdotal evidence. These discussions highlight the flexibility of IF and how individuals tailor it to their lifestyles.

The 16/8 Method

One of the most frequently discussed and adopted methods on Reddit is the 16/8 approach. This involves fasting for 16 hours each day and restricting the eating window to the remaining 8 hours. For instance, a user might finish their last meal at 8 PM and not eat again until 12 PM the next day. Many users report this method as being sustainable and easy to incorporate into daily routines, often coinciding with sleep. The simplicity of this method makes it a popular starting point for newcomers to IF, and threads often offer tips for adjusting the eating window to fit work schedules or social commitments.

The 5:2 Diet

Another popular method that generates a lot of discussion is the 5:2 diet. This involves eating normally for five days of the week and restricting calorie intake to around 500-600 calories on two non-consecutive days. Reddit users often share their experiences with managing hunger and maintaining energy levels on fasting days, along with strategies for choosing nutrient-dense foods on those restricted days. Success stories often emphasize the flexibility of having two "normal" eating days, which can make it feel less restrictive than daily fasting for some.

Eat Stop Eat

The Eat Stop Eat method involves a 24-hour fast once or twice a week. For example, a user might finish dinner on Monday and not eat again until dinner on Tuesday. This method can be more challenging and is often discussed by more experienced IF practitioners on Reddit. Conversations frequently revolve around managing the longer fasting periods, potential fatigue, and the importance of proper hydration. Users also share tips on how to break the fast gently to avoid digestive discomfort.

Alternate-Day Fasting

Alternate-day fasting (ADF) is a more extreme approach where individuals alternate between days of normal eating and days of severe calorie restriction or complete fasting. This method elicits strong opinions and discussions on Reddit, with some users reporting significant weight loss while others find it unsustainable or too challenging. The effectiveness and potential health implications of ADF are often debated, with users seeking advice on managing energy levels and preventing nutrient deficiencies.

Reported Benefits of Intermittent Fasting from Reddit Users

The sheer volume of positive testimonials on Reddit suggests that many individuals experience tangible benefits from adopting intermittent fasting. These benefits extend beyond simple weight loss and touch upon various aspects of health and well-being.

Weight Loss and Fat Reduction

Weight loss is undoubtedly the most frequently cited benefit of IF on Reddit. Users share dramatic before-and-after stories, detailing how IF helped them break through weight loss plateaus and achieve their target body composition. The mechanism often attributed to this is the reduction in overall calorie intake due to a shortened eating window and the metabolic shift towards fat burning during fasted states. Many discussions focus on the sustainability of weight loss achieved through IF compared to traditional calorie restriction diets.

Improved Insulin Sensitivity and Blood Sugar Control

A significant number of users report improvements in their blood sugar levels and insulin sensitivity. This is particularly relevant for individuals managing pre-diabetes or type 2 diabetes, who often find IF helpful in regulating glucose levels. Threads frequently feature discussions about how IF has helped users reduce their reliance on diabetes medication and improve their overall metabolic markers. The reduction in eating periods naturally leads to fewer insulin spikes throughout the day.

Enhanced Mental Clarity and Energy Levels

Contrary to what some might expect, many Reddit users report increased mental clarity, focus, and sustained energy levels while practicing IF. This is often attributed to the switch to using ketones, derived from fat, as an energy source for the brain, which some describe as more stable than glucose. Users frequently mention feeling less prone to the midday slumps that can occur with regular eating patterns.

Autophagy and Cellular Repair

While not always directly observed by users, the concept of autophagy – the body's cellular "clean-up" process – is a frequently discussed scientific benefit of IF. Users share articles and studies, linking the fasted state to increased autophagy, which is thought to contribute to cellular rejuvenation and disease prevention. This aspect often appeals to those interested in the longevity and health-promoting potential of IF.

Simplicity and Convenience

For many, the primary benefit highlighted on Reddit is the sheer simplicity and convenience of IF. Not having to plan or prepare multiple meals throughout the day can be a significant lifestyle advantage. Users often express relief at not constantly thinking about food, which can be freeing and reduce stress associated with dieting.

Challenges and Side Effects Shared on Reddit

While the benefits are widely celebrated, Reddit discussions also offer a realistic perspective on the

challenges and potential side effects of intermittent fasting. Acknowledging these is crucial for anyone considering the practice.

Initial Hunger and Cravings

The most common initial hurdle reported by new IF practitioners is dealing with hunger and cravings, especially during the transition period. Users share strategies for managing these, such as staying hydrated, engaging in distracting activities, and gradually extending fasting windows. Many emphasize that these symptoms usually subside as the body adapts.

Headaches and Fatigue

Some users experience headaches and fatigue, particularly in the early days of IF. This can be related to electrolyte imbalances, caffeine withdrawal, or simply the body adjusting to a new eating schedule. Reddit threads often provide advice on electrolyte supplementation and ensuring adequate sleep to mitigate these effects.

Digestive Issues

While less common, some individuals report digestive issues, such as bloating or constipation, when their eating window is too short or if they consume large meals after a long fast. The advice often given is to ease back into eating with smaller, nutrient-dense meals and to prioritize fiber intake during the eating window.

Social Challenges

Navigating social events, family meals, and dining out can present challenges for those practicing IF. Reddit users frequently share tips for managing these situations, such as planning meals around social engagements or communicating their eating schedule to friends and family. Finding flexibility within the IF framework is a recurring theme.

Risk of Nutrient Deficiencies

A crucial discussion point on Reddit involves the potential risk of nutrient deficiencies if not approached mindfully. Users emphasize the importance of consuming a balanced and nutrient-dense diet within the eating window to ensure adequate intake of vitamins and minerals. Those with pre-existing medical conditions are strongly advised to consult with a healthcare professional before starting IF.

Scientific Perspectives and Reddit Discussions

Reddit communities are not just about anecdotal evidence; they often engage with and dissect

scientific research related to intermittent fasting. This blend of personal experience and scientific inquiry provides a richer understanding.

Metabolic Switching and Ketogenesis

Discussions frequently revolve around the concept of "metabolic switching," where the body transitions from using glucose to using fat (ketones) for energy. Scientific explanations of how fasting triggers this shift are often shared and debated, with users linking it to improved fat burning and potential cognitive benefits.

Hormonal Regulation

The impact of IF on hormones like insulin, leptin, ghrelin, and growth hormone is a hot topic. Users and knowledgeable individuals often cite studies showing how IF can improve insulin sensitivity, influence appetite-regulating hormones, and potentially increase growth hormone secretion, which plays a role in muscle repair and fat loss.

Cellular Health and Longevity

The scientific backing for autophagy and its role in cellular repair and longevity is a subject of intense interest. Reddit threads often link IF to potential anti-aging benefits and disease prevention, drawing upon research in animal models and emerging human studies. The concept of hormesis – the beneficial stress that fasting imposes on cells – is also a common point of discussion.

Gut Microbiome Impact

Emerging research on the gut microbiome's response to fasting is also appearing in Reddit discussions. While more research is needed, some users speculate and share findings on how IF might influence the composition and diversity of gut bacteria, potentially impacting overall health and immunity.

Who Should Consider Intermittent Fasting?

While intermittent fasting is popular, it's not suitable for everyone. Reddit discussions often highlight specific populations who might benefit most, as well as those who should exercise extreme caution or avoid it altogether.

Individuals Seeking Weight Management

Those struggling with excess weight or obesity often find success with IF. The structured eating windows can naturally lead to a reduction in calorie intake and promote fat loss, as widely documented by users in various subreddits.

People with Metabolic Health Concerns

Individuals with insulin resistance, pre-diabetes, or type 2 diabetes frequently report positive outcomes with IF, under medical supervision. The improved insulin sensitivity and blood sugar regulation can be significant benefits.

Those Looking for Simplicity in Their Eating Habits

If you find traditional diets restrictive or overwhelming, the simplicity of IF's time-restricted eating can be appealing. It shifts the focus from constant food choices to a structured eating schedule.

Individuals With a History of Eating Disorders

It is crucial to note that individuals with a history of eating disorders (such as anorexia nervosa, bulimia nervosa, or binge eating disorder) are strongly advised against practicing intermittent fasting. The restrictive nature of fasting can trigger or exacerbate these conditions. This is a recurring warning in responsible IF communities.

Pregnant or Breastfeeding Women

Nutritional needs are significantly increased during pregnancy and breastfeeding. Intermittent fasting is generally not recommended for these groups due to the potential impact on nutrient intake and energy for both mother and child.

Individuals with Certain Medical Conditions

People with chronic health conditions, especially those affecting blood sugar regulation, heart health, or requiring regular medication, should always consult a doctor before starting IF. This includes individuals taking medication for diabetes, blood pressure, or other chronic illnesses.

Tips for Success from the Reddit Community

The collective experience on Reddit offers a wealth of practical advice for those embarking on or continuing their intermittent fasting journey.

- **Start gradually:** Don't jump into a 24-hour fast on day one. Begin with a 12-hour overnight fast and gradually increase the fasting window.
- **Stay hydrated:** Drink plenty of water, unsweetened tea, or black coffee during fasting periods to manage hunger and prevent headaches.
- **Focus on nutrient density:** When you are eating, prioritize whole, unprocessed foods to ensure

you are getting essential vitamins and minerals.

- Listen to your body: Pay attention to how your body feels. If you experience persistent negative symptoms, it might be a sign that IF isn't the right approach for you, or that you need to adjust your method.
- Plan your meals: Having a plan for your eating window can prevent impulsive, unhealthy food choices and ensure balanced nutrition.
- Be patient: It takes time for your body to adapt. Don't get discouraged by initial challenges.
- Find a support system: Engaging with online communities like Reddit can provide motivation, accountability, and practical tips from others on a similar journey.

Closing Thoughts on Intermittent Fasting and Reddit

The vast and often passionate discussions surrounding intermittent fasting on Reddit paint a complex yet compelling picture. While personal anecdotes abound, they are frequently interwoven with scientific inquiries and practical advice, creating a rich tapestry of information. The consensus among many users is that intermittent fasting, when approached intelligently and with attention to individual needs, can be a powerful tool for achieving various health and wellness goals, from weight management to metabolic improvements. However, it is equally clear that IF is not a one-size-fits-all solution, and potential challenges and contraindications must be carefully considered. The ongoing dialogue on platforms like Reddit underscores the importance of informed decision-making, personalized adaptation, and, most importantly, listening to one's own body.

Q: Does intermittent fasting work for everyone on Reddit?

A: Not everyone on Reddit reports success with intermittent fasting. While many share positive experiences and significant benefits, others discuss challenges, lack of results, or find the lifestyle unsustainable. The effectiveness often depends on individual physiology, lifestyle, adherence to the method, and overall diet quality during eating windows.

Q: What are the most common intermittent fasting methods discussed on Reddit?

A: The most frequently discussed methods on Reddit include the 16/8 method (16 hours fasting, 8 hours eating), the 5:2 diet (normal eating 5 days a week, calorie restriction on 2 days), and Eat Stop Eat (24-hour fasts once or twice a week). Alternate-day fasting is also discussed but is generally considered more advanced and challenging.

Q: Are the weight loss claims on Reddit about intermittent fasting scientifically supported?

A: Yes, to a significant extent. Scientific research generally supports intermittent fasting as an effective strategy for weight loss, primarily due to a reduction in overall calorie intake and metabolic shifts that promote fat burning. Reddit discussions often reflect these scientifically recognized benefits, with users sharing their personal weight loss journeys.

Q: What are the most frequently reported side effects of intermittent fasting on Reddit?

A: The most common side effects reported by Reddit users include initial hunger and cravings, headaches, fatigue, and sometimes digestive issues. Many users emphasize that these are often temporary and subside as the body adapts.

Q: Does Reddit offer advice on how to start intermittent fasting?

A: Yes, Reddit communities dedicated to intermittent fasting are filled with advice for beginners. Common tips include starting with a shorter fasting window (like 12 hours), staying hydrated, focusing on nutrient-dense foods during eating periods, and gradually increasing fasting duration.

Q: Can intermittent fasting improve mental clarity, as often discussed on Reddit?

A: Many Reddit users report improved mental clarity, focus, and energy levels while practicing intermittent fasting. This is often attributed to the shift towards using ketones for brain fuel, which some describe as more stable than glucose. Scientific literature is also exploring these potential cognitive benefits.

Q: What are the risks of intermittent fasting that Reddit users often warn about?

A: Reddit users frequently warn about the potential risks of nutrient deficiencies if the diet isn't balanced during eating windows, the unsuitability for individuals with a history of eating disorders, and the importance of consulting a doctor for those with pre-existing medical conditions or taking medications.

Q: How do Reddit discussions address the social challenges of intermittent fasting?

A: Reddit users share numerous strategies for overcoming social challenges, such as planning meals around social events, communicating their eating schedule to friends and family, and finding flexibility within their IF protocol. The emphasis is on adapting the eating pattern to fit one's social

life rather than letting it dictate it entirely.

does intermittent fasting work reddit: Antisocial Andrew Marantz, 2020-09-15 Trenchant and intelligent. --The New York Times As seen/heard on NPR, New Yorker Radio Hour, The New York Book Review Podcast, PBS Newshour, CNBC, and more. A New York Times Book Review Editors' Choice A New York Times Notable Book of 2019 From a rising star at The New Yorker, a deeply immersive chronicle of how the optimistic entrepreneurs of Silicon Valley set out to create a free and democratic internet--and how the cynical propagandists of the alt-right exploited that freedom to propel the extreme into the mainstream. For several years, Andrew Marantz, a New Yorker staff writer, has been embedded in two worlds. The first is the world of social-media entrepreneurs, who, acting out of naïvete and reckless ambition, upended all traditional means of receiving and transmitting information. The second is the world of the people he calls the gate crashers--the conspiracists, white supremacists, and nihilist trolls who have become experts at using social media to advance their corrosive agenda. Antisocial ranges broadly--from the first mass-printed books to the trending hashtags of the present; from secret gatherings of neo-Fascists to the White House press briefing room--and traces how the unthinkable becomes thinkable, and then how it becomes reality. Combining the keen narrative detail of Bill Buford's *Among the Thugs* and the sweep of George Packer's *The Unwinding*, Antisocial reveals how the boundaries between technology, media, and politics have been erased, resulting in a deeply broken informational landscape--the landscape in which we all now live. Marantz shows how alienated young people are led down the rabbit hole of online radicalization, and how fringe ideas spread--from anonymous corners of social media to cable TV to the President's Twitter feed. Marantz also sits with the creators of social media as they start to reckon with the forces they've unleashed. Will they be able to solve the communication crisis they helped bring about, or are their interventions too little too late?

does intermittent fasting work reddit: Intermittent Fasting Charlie Mason, 2020-11-21 If you need to lose weight, look great, reduce inflammation, boost your immunity, or a myriad of other benefits, then you should consider one of the various intermittent fasting methods. There are different forms of intermittent fasting so if you want to fast responsibly, then you should find the type of fasting that suits you best. For instance, there is the 16-8 fasting where you fast for 16 hours and then eat your meals within the remaining 8 hours. Then there is the alternate day fast where you fast on one day and eat normally the next. You may also choose the extended fast where you fast for a longer period of time such as 8 days or more. Traditional fasting has proven to be ineffective with many people unable to cope with the tough requirements. Ordinarily, people would fast from dawn to dusk for probably an entire month, having to endure days on end without proper meals. Then once the benefits of fasting are achieved, they would resume normal life only for the problems to creep back again. This can be very frustrating. Fortunately, intermittent fasting solves this challenge. Rather than go through lengthy periods of fasting, all you need to do is identify the most suitable intermittent type of fasting. For instance, you may choose the 16-8 format where you go for 16 hours without eating anything and only eat within an 8-hour window in any given day.

Fortunately, the 16 hours of fasting include your sleeping time so you will be asleep for about half of that time. Intermittent fasting has gained popularity because it offers choice, is easy to handle and has a lot of benefits but without the rigors and disadvantages of traditional ways of fasting. If you need to lose weight, look great, reduce inflammation, boost your immunity, or a myriad of other benefits, then you should consider one of the various intermittent fasting methods. ----- Tags: Fasting Intermittent Weight Loss Guide Your Muscle Diet Burn Lose Build Healthy intermittent fasting intermittent fasting books intermittent fasting for women intermittent fasting diet intermittent fasting and ketogenic diet intermittent fasting 101 intermittent fasting free kindle books intermittent fasting for men intermittent fasting and keto diet intermittent fasting and keto intermittent fasting and cancer intermittent fasting and carb cycling intermittent fasting and diabetes intermittent fasting and feasting intermittent fasting and paleo intermittent fasting books for men how to lose weight fast 5 2 diet weight loss diet diet plan for weight loss 16 8 diet what is intermittent fasting fasting for weight loss diet plan to lose weight fast fat loss diet benefits of fasting ways to lose weight intermittent fasting benefits intermittent fasting results best diet to lose weight diets to lose weight fast intermittent fasting weight loss alternate day fasting five two diet 5 and 2 diet does intermittent fasting work best diet plan to lose weight fast how to do intermittent fasting diet meal plan to lose weight 5 2 diet plan health benefits of intermittent fasting what to eat when intermittent fasting lose fat fast fasting and weight loss healthy dinner for weight loss intermittent fasting studies how to do fasting nutrition plan for weight loss 24 hour fast fasting for a week fasting every other day the 5 2 diet best weight loss meal plan intermittent fasting

does intermittent fasting work reddit: Intermittent Fasting for Women Hanna Greenberg, 2019-07-14 When you look at the mirror, do you like what you see? Studies show that most people who're trying to lose weight, quit in the middle, fall back to their old eating habits, and even gaining a pound or two. The main problems with weight loss are: - Hunger is too hard to handle - Old eating habits are too strong in the brain to simply ignore them - Sugar cravings are more intense and push people to binge eating - Working out too much is boring and can even trigger hunger hormones, eating back all of the calories that were burned in the exercise If you have ever tried to lose weight, you probably can relate to those points above. Here's something interesting though... Recent studies showed that when women were asked NOT to eat AT ALL for periods of 8, 12 and even 24 hours, something remarkable happened in their body... In intermittent fasting for women you'll discover: - What is intermittent fasting, and why is it so effective on women - Different fasting protocols so you can pick and choose whatever works for you - Physical & Psychological benefits of intermittent fasting, so you can understand why this method is so, so effective - How to handle hunger, boredom, and make fasting fun instead of a chore - What to eat when you're not in the fasting period, so you can turbo-charge your fat burn - And much, much more! Not only that the studies showed that the subjects were losing fat like crazy, they were also monitoring their hunger hormones, happiness and focus. The fasting group, compared to the group of low-calorie consistent meals and the placebo group, were showing a huge spike in focus and happiness, while hunger hormones and hunger feeling were down. With intermittent fasting for women, you'll lose fat quickly and easily, but more than that - intermittent fasting can also help you to become a better mom, better wife, better worker, and a happier woman! does intermittent fasting work reddit: WEIGHT LOSS THROUGH FASTING Mark Phens, 2021-06-02 **55% OFF for Bookstores!! LAST DAYS*** Fasting is undeniably a craze right now. There are articles about it all over the internet and everyone seems to have an opinion. But if you don't really understand fasting, this deluge of information can be more overwhelming than helpful. Intermittent fasting isn't as complicated or scary as it might seem. It's actually a very simple lifestyle plan with lots of inherent benefits. If you aren't familiar with intermittent fasting, it is a term that refers to regulating your diet with periods where you don't eat, followed by periods where you do eat. Fasting works because when you stop eating for a time, your body goes into a process called ketosis that has great effects on your body and mind. Though fasting can get more complicated as you hone in on the perfect type of fasting for your body, at its base, fasting works off of a really simple idea. When you don't eat-you lose weight do to how our bodies evolved. Fasting, broken down, is just a meal timing plan. You simply schedule times where you abstain from food. That's it. Fasting is a period of eating interspersed with periods of not consuming calories. So that is what fasting is in a nutshell. However, looking a little deeper can give you an idea of what intermittent fasting can do for you and some of the things that fasting is not. The craze arising around fasting currently is happening for good reason. Fasting works. It is a long term solution based on how our bodies evolved and working with our natural systems. If you are looking to lose weight, or to gain the cognitive benefits associated with fasting, you may want to dig a little deeper into what intermittent fasting is, how it works, where it comes from, and how you can best reap the benefits.

does intermittent fasting work reddit: Intermittent Fasting for Women Anne DuBois, 2018-11-30 How Does Intermittent Fasting Work? Some people use Intermittent Fasting (aka IF) to decrease the calories they eat each day so they can lose weight using the CICO method (Calories In, Calories Out). By fasting and not eating for part of the day, you can naturally decrease calories, put yourself in a calorie deficit and can lose weight. If you're using Intermittent Fasting for Autophagy, Autophagy will help your body to achieve cellular regeneration and help you live a more healthy life. You can also practice a Keto Diet and Intermittent Fasting, wherein you eat a low carb, high fat Diet (aka LCHF Diet). The Intermittent Fasting Guide is Brief and to the Point. It Includes: The Most Popular Intermittent Fasting Protocols, which are: 16/8 Intermittent Fasting Protocol One Meal A Day (OMAD) Intermittent Fasting Protocol Alternate Day Intermittent Fasting Protocol 5:2 Intermittent Fasting Protocol The Intermittent Fasting Guide Also Includes Plenty of Tips and Recommendations and... Information About Intermittent Fasting Specifically for Women. Does Intermittent Fasting Work? Yes. It can work if you're consistent with your Intermittent Fasting Diet. To use Intermittent Fasting for Weight Loss or for Autophagy, consistently follow an Intermittent Fasting Protocol and decrease Calories (or Carbs if you are combining Intermittent Fasting and the Keto Diet). Is Intermittent Fasting Healthy? Yes. With Intermittent Fasting, you shorten your eating period so eat less and experience Weight Loss and/or Autophagy. It's similar to a diet, where you decrease your calories per meal, or where you decrease carbs or fat - Except that you fast and then can generally eat your regular calories typically during lunch and dinner (if you're following a 16:8 protocol). Intermittent Fasting is a way to delay eating foods, without depriving yourself of them. Download Now And Start Intermittent Fasting TODAY! -----Book 2 If there was a diet plan that allowed you to burn more fat, build muscle, and enjoy the benefits of a longer, healthier, and more productive life, wouldn't you want to know about it? Then this is the book you have been waiting for. The reason mostly all diets fail isn't because we switch to the wrong foods, it is simply because we don't actually sustain the diet over the long-run. It's not a nutrition or

nourishment problem, it's a behavior change problem. In my personal opinion, the ease and simplicity of intermittent fasting is the best reason to give it a try. You will find that it provides a wide range of health benefits without requiring massive lifestyle changes. If you are ready to take action and see mind boggling results fast, then this book is for you! By fasting intermittently your body is able to survive on a lower caloric intake throughout the week and as a result of this switch, metabolic changes occur as a result. Normally your body is most likely running on extra carbohydrates as its primary fuel source while it leaves stored fat deposits alone for emergency use, but when you fast, the body switches gears and fat becomes the fuel source, allowing you to burn those dreaded fat deposits directly. Here is a preview of what you will learn... Chapter 1 - What Is Intermittent Fasting & How Does It Work? Chapter 2 - How Can You Really Afford It? Your Lifestyle? Chapter 3 - Lose Weight - Many Diets Don't Work, Intermittent Fasting Does? does intermittent fasting work reddit: Intermittent Fasting Minerva P. S. & Co, 2019-03-28 If you want to lose 10 pounds in less than 2 weeks while still being able to eat what you want, then keep reading... I have been struggling with my weight for the majority of my life. I have always been able to build muscle when I exercised, but could not lose fat despite how many miles I ran or how many crunches I've done. This led me to realize that the issue was not with how I was exercising, but the source of my problems was my diet. I spent months trying multiple diets and listening to people who claimed to be experts in their fields. Half of the diets they advised me to try did not work, and the other half of the diets that could work kept me from enjoying what I ate. This led me to do my own research, and what I found was that intermittent fasting was the best solution for me. I was allowed to eat the foods which I enjoyed the most, and because of intermittent fasting, I was able to go from 230 lbs at 5'10 to 175 lbs in 7 and a half months. In addition to this, intermittent fasting also promotes autophagy in the body, one of the primary benefits. Autophagy is a process by which the body undergoes a cellular detox by eradicating damaged cells and regenerating new ones. Nutrient deprivation is what primarily activates autophagy. When food is consumed, the body's insulin increases and glucagon decreases, and fasting has the opposite effect, therefore fasting stimulates autophagy. One of the primary benefits of autophagy is that it eradicates old and damaged proteins, the accumulation of which is heavily associated with Alzheimer's disease and cancer. More beneficial scientific information regarding autophagy will be discussed in the book. The benefits of reading this book: An explanation of intermittent fasting How to properly implement intermittent fasting Learn about the effects and benefits of intermittent fasting A scientific explanation of autophagy and how it relates to the diet The science behind how different hormones influence your ability to lose weight Figure out what body type you are Understand how to properly exercise to achieve your ideal body as an endomorph, ectomorph or mesomorph Health benefits of the diet: Blood levels of insulin drops The body induces cellular repair at a higher rate Blood levels of HGH increase potentially 5 times higher A lower risk of type 2 diabetes Reduce insulin resistance and help lower blood sugar levels Increased fat burning Reduced risk of cancer Improved heart health by improving numerous different risk factors, including blood pressure, total and LDL cholesterol, blood triglycerides, and inflammatory markers Improved brain health by reducing oxidative stress and inflammation Increases levels of brain-derived neurotrophic factor (BDNF) which may reduce depression This diet is so easy to follow and allows you to enjoy the food you eat so that even if you failed every other diet in your life you can have success with this one.
