The Science Behind BPM and HIIT Workout Music 60 20

The effectiveness of music in workouts, especially high-intensity interval training, is strongly linked to its tempo, measured in beats per minute (BPM). For a 60/20 interval structure, where you perform an exercise for 60 seconds followed by 20 seconds of rest, the ideal BPM range often falls between 120 and 150 BPM. This range is scientifically recognized for its ability to synchronize with human movement and elevate heart rate appropriately, pushing the body closer to its anaerobic threshold during work intervals. The rhythm and cadence of the music can act as a subconscious cue, encouraging a faster pace and more explosive movements when needed.

The 60-second work interval in a 60/20 HIIT format demands sustained effort. Music within the 120-150 BPM range provides a consistent, driving force that can help individuals maintain intensity throughout this period. It's not just about speed; it's about the perceived exertion. Faster tempos have been shown to reduce the perception of effort, making those challenging 60 seconds feel more manageable. Conversely, the 20-second rest interval benefits from slightly slower, more calming music, or even a brief pause in music, to facilitate recovery and prepare for the next burst of activity.

How BPM Affects Heart Rate and Performance

Music's influence on heart rate is a well-documented phenomenon. Faster BPMs tend to increase

heart rate, blood pressure, and respiration rate, mirroring the physiological demands of intense exercise. During the 60-second work periods of your HIIT workout music 60 20 sessions, a tempo of 130-145 BPM can effectively push your heart rate into the target zone, optimizing fat burning and cardiovascular conditioning. This correlation is so strong that some athletes and trainers use music selection as a tool to precisely manage exercise intensity.

The connection between BPM and perceived exertion is also crucial. When listening to music that is faster than their natural resting heart rate but within a challenging range, individuals often report feeling more energized and less fatigued. This psychological boost is vital for pushing through the discomfort inherent in HIIT, especially during the longer 60-second work intervals. The rhythmic structure of the music can also inspire a sense of flow and coordination, making complex movements feel more fluid and less taxing.

The Role of Rhythm and Cadence in 60/20 Intervals

Beyond just the speed of the beats, the rhythmic patterns and overall cadence of the music play a significant role in **hiit workout music 60 20**. A strong, consistent beat provides a reliable anchor for your movements, encouraging consistent pacing and power output during the 60-second intervals. Syncing your actions, such as jumps, sprints, or strength exercises, to the beat can enhance efficiency and muscular engagement. For instance, a powerful bass drum or snare hit can coincide with the peak of a jump or the completion of a repetition.

During the 20-second rest, the music can either shift to a slightly lower BPM to promote relaxation and heart rate recovery, or the intensity can be maintained to encourage active recovery (e.g., light jogging or dynamic stretching). The transition between these phases, guided by the music, is key to maximizing the benefits of the 60/20 protocol. A well-chosen track can signal the end of rest and the imminent start of work, preparing the body and mind for renewed exertion.

Psychological Benefits of Music During HIIT

The impact of music on mental state during exercise cannot be overstated, particularly in the context of high-intensity training like HIIT. Music acts as a powerful distraction from fatigue and discomfort, allowing individuals to push harder and longer. For **hiit workout music 60 20**, the right selection can transform a grueling set into an exhilarating experience, fostering a sense of empowerment and achievement.

The motivational power of music stems from its ability to trigger the release of dopamine, a neurotransmitter associated with pleasure and reward. This neurochemical response makes exercise feel more enjoyable and can help overcome mental barriers that might otherwise lead to quitting early. The sense of flow and immersion induced by engaging music can also create a positive feedback loop, reinforcing the desire to continue exercising.

Distraction from Fatigue and Pain Perception

During the intense 60-second work intervals, fatigue and muscle burn are inevitable. Music acts as a potent distraction, diverting attention away from these physical sensations. By focusing on the rhythm, melody, and lyrics, the brain can process less of the discomfort signals from the body, leading to a lower perception of pain and effort. This is particularly effective for **hiit workout music 60 20**, where sustained high effort is required.

Studies have shown that listening to preferred music can increase pain tolerance and reduce the feeling of exertion during strenuous physical activity. The engaging nature of upbeat music can shift the mental focus from "I'm tired" to "I'm energized by this song," a crucial psychological shift for optimal HIIT performance.

Enhancing Motivation and Drive

Motivation is the cornerstone of any successful workout program, and for HIIT, it's paramount. Music serves as a powerful external motivator, providing the drive needed to initiate and complete intense intervals. The upbeat tempos and anthemic qualities of many popular workout tracks can foster a sense of invincibility, encouraging individuals to tackle challenging exercises with gusto. This is especially relevant for **hiit workout music 60 20**, where consistent effort is key.

The emotional connection people have with music allows it to tap into deeper wells of motivation. A song that evokes feelings of determination, triumph, or rebellion can be incredibly effective in pushing someone to their limits during a high-intensity bout. The shared experience of listening to music, even alone, can also create a sense of camaraderie with other fitness enthusiasts who use similar tracks.

Building a Sense of Flow and Immersion

Flow state, a concept described by psychologist Mihaly Csikszentmihalyi, is a mental state of operation in which a person performing an activity is fully immersed in a feeling of energized focus, full involvement, and enjoyment in the process of the activity. Music is a well-known catalyst for achieving this state during exercise. For **hiit workout music 60 20**, a perfectly curated playlist can seamlessly guide participants through their intervals, creating a smooth and almost effortless experience.

When the music perfectly aligns with the workout's intensity and duration, it can create a powerful sense of immersion. The outside world fades away, and the focus becomes entirely on the movement and the beat. This deep engagement not only enhances performance but also makes the workout more enjoyable and less like a chore. The right music can make you forget the clock and simply move.

Structuring Your HIIT Workout Music 60 20 Playlists

Creating an effective playlist for **hiit workout music 60 20** requires more than just picking a collection of fast songs. It involves a strategic approach to tempo changes, song structure, and the overall energy flow of the music to match the ebb and flow of your workout intervals. A well-structured playlist can enhance transitions, maintain intensity, and facilitate recovery.

The goal is to create a sonic landscape that supports your physical efforts. This means selecting songs with clear intros, energetic choruses that align with your work intervals, and slightly more subdued bridges or outros that can complement your rest periods. The progression of songs throughout your workout should also consider the increasing fatigue and the need for sustained motivation.

Matching Song Structure to Work and Rest Intervals

For 60/20 intervals, the ideal song structure often features a strong, driving beat that kicks in at the beginning of the 60-second work period and maintains its intensity. Look for tracks with a consistent BPM throughout, or songs that build in intensity towards their chorus. The chorus is often the most powerful and motivating part of a song, making it perfect for syncing with your peak effort during the 60-second work phase.

The 20-second rest can be supported by a bridge, an instrumental break, or the fade-out of a song. While some prefer complete silence or a slower tempo for recovery, many find that maintaining a moderate to slightly lower BPM during rest can still provide a sense of momentum without being overly taxing. The key is to ensure the music helps you recover mentally and physically, preparing you for the next work interval.

Tempo Progression and Energy Flow

A dynamic playlist for **hiit workout music 60 20** should consider a gradual increase in tempo or intensity as the workout progresses. Starting with a slightly lower BPM in the warmer-up phase, gradually building to the peak 120-150 BPM for the main intervals, and then perhaps mellowing out for the cool-down. This mimics the natural progression of physiological exertion and recovery within a training session.

Consider the energy arc of your playlist. You want it to start strong, maintain that intensity throughout the challenging 60/20 intervals, and provide a sense of accomplishment and release as you cool down. Think about the emotional impact of the songs; starting with something that gets you pumped, sustaining that through the core of the workout, and ending with tracks that leave you feeling accomplished and satisfied.

The Importance of Genre Variety

While a specific BPM range is important, so is the musical style. Different genres of music can evoke different moods and energy levels. For **hiit workout music 60 20**, a mix of high-energy electronic dance music (EDM), energetic pop, rock anthems, and even some hip-hop can provide the necessary drive. Variety can prevent boredom and cater to different preferences, ensuring that the music remains a motivator rather than a monotonous backdrop.

Exploring genres that are known for their consistent, driving beats can be very beneficial. However, don't be afraid to experiment. Sometimes, a track from an unexpected genre might have the perfect tempo and energy to power your intervals. The key is to ensure the music resonates with you and helps you achieve your fitness goals.

Finding the Best HIIT Workout Music 60 20 Tracks

Sourcing the right tracks is fundamental to maximizing the effectiveness of your **hiit workout music 60 20** sessions. Fortunately, there are numerous resources available, from dedicated workout music platforms to general streaming services that allow for detailed filtering and curation. The key is to know where to look and what criteria to prioritize.

When searching for music, consider using keywords that reflect both the workout type and desired tempo. Terms like "HIIT playlist," "interval training music," "130 BPM workout," or "high-intensity cardio mix" can help narrow down your search. Many platforms also offer curated playlists specifically designed for different training protocols.

Utilizing Music Streaming Services

Major music streaming platforms like Spotify, Apple Music, and YouTube Music are invaluable tools for finding **hiit workout music 60 20**. These services offer extensive libraries and robust search functionalities. You can search for pre-made HIIT playlists, browse by BPM, or even create your own by adding individual tracks. Many also feature radio functions that can introduce you to similar artists and songs.

Pay attention to user-generated playlists as well, as they often reflect real-world usage and preferences. Look for playlists with high numbers of followers or likes, as these are typically well-received and effective. Some services even allow you to analyze the BPM of individual songs, making it easier to build a playlist that strictly adheres to your desired tempo for the 60/20 structure.

Dedicated Workout Music Apps and Platforms

Beyond general streaming services, several specialized apps and platforms cater specifically to workout music needs. These often provide curated mixes designed for specific workout durations

and intensity levels, including **hiit workout music 60 20**. Some even offer features that dynamically adjust the music's tempo based on your heart rate or workout phase.

These dedicated platforms can save you time and effort in curating your own playlists. They often have professional DJs or fitness experts creating their mixes, ensuring a high level of quality and effectiveness. Examples include apps like FITRadio, RockMyRun, and others that focus on providing a seamless audio experience for exercise.

Manual BPM Checking and Playlist Curation

For the most personalized and effective **hiit workout music 60 20** experience, manual curation is often the best approach. While services can suggest tracks, you know your body and your music preferences best. Use online BPM calculators or music analysis software to verify the tempo of songs you're considering.

When building your playlist, aim for a mix of familiar favorites and new discoveries. Familiar songs can offer a strong motivational boost due to their emotional connections, while new tracks can keep your playlist fresh and exciting. Organize your playlist logically, starting with warm-up tracks, moving into the high-intensity interval songs, and finishing with cool-down music.

Practical Tips for Using Music in Your HIIT Sessions

The effectiveness of **hiit workout music 60 20** is amplified when practical considerations are taken into account. From the equipment you use to how you manage your music during the workout, small details can make a big difference in your overall experience and performance.

Ensuring your music is accessible and controllable without interrupting your flow is crucial. This means having a reliable playback device and comfortable, secure headphones. Preparing your playlist in advance and understanding its structure will allow you to focus entirely on your workout.

Choosing the Right Headphones

For intense workouts like HIIT, the type of headphones you use is important. Wireless, sweat-proof earbuds are often the preferred choice, offering freedom of movement and resistance to moisture. Look for earbuds with a secure fit that won't fall out during dynamic exercises. Noise-canceling features can also be beneficial for blocking out external distractions and enhancing immersion in your **hiit workout music 60 20**.

Consider headphones with easy-to-access controls, allowing you to adjust volume or skip tracks without fumbling. Some earbuds have touch controls or physical buttons that are conveniently located for quick adjustments mid-workout. The sound quality should also be sufficient to provide clear and powerful audio that keeps you motivated.

Managing Playback and Transitions

During a high-intensity interval, complex actions are required, making it difficult to manage music playback. Ideally, your playlist should be set to shuffle or play sequentially without requiring manual intervention during the 60-second work periods. However, for specific interval structures, manual control might be needed.

If you need to control your music, ensure the device and controls are easily accessible and intuitive. Some users create shorter, more focused playlists for each workout to simplify management. Another strategy is to use music that has distinct breaks or sections that naturally align with your rest periods, reducing the need for constant adjustments. For **hiit workout music 60 20**, having songs that clearly delineate their sections can be very helpful.

Warm-up and Cool-down Music

The music you choose for your warm-up and cool-down phases is just as important as the music for your work intervals. For the warm-up, select tracks with a moderate BPM (around 100-120 BPM) that gradually increase in tempo. This helps prepare your body for the intensity to come and avoids shocking your system.

For the cool-down, opt for slower tempo music (around 80-100 BPM) with a calming and soothing effect. This aids in bringing your heart rate down gradually and promotes recovery. The transition from high-energy **hiit workout music 60 20** to slower cool-down tracks should be smooth, allowing your body and mind to wind down effectively.

Maximizing Your 60/20 Intervals with the Right Music

The synergy between the 60/20 interval structure and expertly chosen music is where truly transformative HIIT workouts happen. It's about leveraging the motivational and physiological effects of sound to push your limits and achieve greater results. When the music aligns perfectly with your physical exertion, it creates an environment where you're not just exercising, you're thriving.

This alignment goes beyond simply picking songs with the right BPM. It involves understanding how different musical elements can influence your effort, recovery, and overall mindset. By being intentional with your music selection, you can unlock new levels of performance and enjoyment in your **hiit workout music 60 20**.

Using Music as a Pacing Tool

The consistent rhythm of **hiit workout music 60 20** can serve as an invaluable pacing tool. During the 60-second work interval, allow the beat to dictate your movement speed and intensity. If you feel

yourself slowing down, the driving rhythm of the music can provide the necessary push to regain your pace. Conversely, during the 20-second rest, a slight drop in tempo or a more melodic section can encourage a slower, more controlled recovery.

Experiment with different genres and tempos to see what works best for pacing your specific exercises. For example, a fast-paced EDM track might be ideal for sprints or burpees, while a powerful rock anthem could be better suited for strength-focused intervals. The key is to find music that inspires consistent, high-quality effort.

Leveraging Music for Mental Toughness

HIIT is as much a mental challenge as it is a physical one. The right **hiit workout music 60 20** can build mental toughness by providing an escape from discomfort and reinforcing a positive, determined mindset. When you're in the throes of a tough interval, a powerful song can act as a mental anchor, reminding you of your strength and resilience.

Choose music that has lyrics or a vibe that resonates with themes of perseverance, power, or overcoming obstacles. This can create a powerful mental dialogue that fuels your effort and prevents you from giving up. The music becomes your internal coach, pushing you forward when your body wants to quit.

Post-Workout Reflection and Music

While the focus is often on the workout itself, the music you choose for your cool-down and immediate post-workout period can also contribute to recovery and mental well-being. Calming music can help reduce residual stress hormones and promote a sense of accomplishment.

Reflecting on your performance while listening to uplifting or serene music can solidify the positive feelings associated with your hard work. This mindful approach to the end of your **hiit workout music 60 20** session can enhance long-term adherence and enjoyment of your training regimen.

The Evolution of HIIT Workout Music 60 20

The relationship between music and exercise has evolved significantly, and **hiit workout music 60 20** is no exception. What once might have been a simple matter of picking a few fast songs has become a more sophisticated and data-driven approach to training. The advancements in music technology and our understanding of exercise physiology have opened up new possibilities for optimizing workout soundtracks.

From the days of portable CD players to today's sophisticated streaming algorithms, the way we access and utilize music for our workouts has transformed. This evolution continues to shape how we approach high-intensity training, making it more accessible, enjoyable, and effective for a wider

audience.

Technological Advancements in Music Playback

The advent of digital music players and smartphones has revolutionized workout music accessibility. Gone are the days of skipping CDs or managing bulky cassette players. Today, vast libraries of music are available at our fingertips, with smart devices capable of tracking BPM and even adapting music to our physiological responses.

The development of wireless earbuds and advanced audio technology has also played a crucial role. Sweat-proof, secure-fitting headphones ensure that your music stays with you throughout the most demanding exercises. Features like active noise cancellation further enhance immersion, creating a focused training environment. These technological leaps have made creating and enjoying **hiit workout music 60 20** simpler and more effective than ever before.

Data-Driven Music Curation

With the rise of fitness trackers and wearable technology, music curation for workouts is becoming increasingly data-driven. Platforms now exist that analyze your heart rate, cadence, and workout intensity to suggest or even dynamically adjust music accordingly. This allows for a highly personalized **hiit workout music 60 20** experience, where the music actively supports your physiological state.

This trend towards data integration means that your workout music can be more than just a motivational tool; it can become an active participant in your training. By understanding how your body responds to different tempos and song structures, you can fine-tune your playlists for maximum efficacy.

The Future of Workout Music

The future of **hiit workout music 60 20** likely involves even greater integration of artificial intelligence and biometric feedback. Imagine music that not only matches your BPM but also adapts its intensity, mood, and even genre in real-time based on your fatigue levels, heart rate variability, and perceived exertion.

We may also see more personalized music generation, where AI creates unique soundscapes tailored to individual preferences and training goals. The aim will always be to enhance the connection between the mind, body, and music, making every workout session a powerful and engaging experience. The continuous innovation promises an exciting future for how we use sound to fuel our fitness endeavors.

FAQ

Q: What BPM is generally recommended for HIIT workout music 60 20?

A: For 60/20 HIIT intervals, the recommended BPM typically falls between 120 and 150 BPM. This range is effective for elevating heart rate and maintaining intensity during the 60-second work periods while allowing for adequate recovery within the 20-second rest.

Q: How does music specifically help during the 60-second work interval of HIIT?

A: During the 60-second work interval, music with an energetic tempo and strong beat acts as a powerful motivator, distracts from fatigue and perceived exertion, and can help synchronize movements, allowing individuals to push harder and maintain intensity for the full duration.

Q: Can the music change between the 60-second work and 20-second rest periods in a HIIT workout?

A: Yes, many find it beneficial to have slightly different music or tempo for the rest periods. This could involve a track with a lower BPM, a more melodic section of the same song, or even a brief pause in music to aid in heart rate recovery and mental refocusing before the next work interval.

Q: What genres of music are best for HIIT workout music 60 20?

A: High-energy genres such as electronic dance music (EDM), upbeat pop, rock, and certain types of hip-hop are often ideal for HIIT workout music 60 20 due to their driving beats and motivational qualities. However, personal preference is key, as long as the tempo and energy are appropriate.

Q: Where can I find pre-made playlists for HIIT workout music 60 20?

A: You can find pre-made playlists on popular music streaming services like Spotify, Apple Music, and YouTube Music by searching for terms like "HIIT playlist 60/20," "interval training music," or "high-intensity BPM workout." Dedicated workout music apps also offer curated selections.

Q: How important is the song structure for HIIT workout music 60 20?

A: Song structure is very important. Tracks with clear intros, strong choruses that align with peak effort, and bridges or outros that can accommodate rest periods are ideal. A well-structured song can naturally guide the user through the work and rest intervals.

Q: Can I use music to actively pace my 60-second HIIT intervals?

A: Absolutely. The consistent rhythm of 60/20 HIIT music can serve as an excellent pacing tool. You can sync your movements to the beat, allowing the music to dictate your speed and intensity, ensuring you maintain a high level of effort throughout the 60-second work periods.

Q: Does the music need to be fast for the 20-second rest period in HIIT?

A: Not necessarily. While some prefer to maintain a consistent energy, others find that slightly slower tempos or more melodic music during the 20-second rest helps with active recovery. The goal is to facilitate recuperation without completely losing momentum.

hiit workout music 60 20: The Greatest College Health Guide You Never Knew You Needed Jill Henry, Dave Henry, 2021-06 ***2022 Independent Press Award: Winner, Young Adult***
American Book Fest Best Book Award: Winner, College Guides ***NYC Big Book Award:

Distinguished Favorite, Health/Fitness*** ***Readers Favorite Book Award: Bronze Medalist, Health/Fitness*** ***Living Now Book Award: Bronze Medalist, Health/Wellness*** ***Firebird Book Award: Winner, Health*** ***Literary Titan: Gold Award Winner*** The coach's guide to beating the Freshman Fifteen, Sophomore Slump, crippling anxiety, and your worst hangover! Learn to take care of yourself, and de-stress throughout your undergrad years and beyond. Every fall, millions of young adults crash into college fired up for the best four years of their lives, ready to experience campus life, take classes about things they're interested in, and meet people from all over the world. Most students, however, are better prepared to pick their major or talk to strangers than they are to take care of themselves in the college setting. College students today are more depressed, anxious, and stressed than previous waves of students; they're also more sedentary, not really exercising, and living in a meal-plan limbo supplemented with ramen and coffee. In this comprehensive field guide, high school coaches Jill and Dave Henry break down the facts and deliver doable, no-BS strategies for managing physical and mental health on campus. In addition to helpful, interactive graphics, the coaches share their relatable true stories—ranging from the ridiculous to the serious—to discuss the five biggest health obstacles students face in college. On top of research-backed tips, *The Greatest College Health Guide You Never Knew You Needed* also features raw and personal advice from current students on college campuses across the country. While simply figuring out what to eat and how to exercise can be completely overwhelming, this guide goes beyond a basic crash course on how to be healthy. Jill and Dave cover everything from crucial time-management skills to the complex sensitivity of self-doubt, sexual assault, and depression with humor, humility, and heart. *The Greatest College Health Guide You Never Knew You Needed* is a complete road map for how to take care of your mind and body that will not only set students up to crush the next four years, but will also provide a foundation they can carry with them for the rest of their lives.

hiit workout music 60 20: Formula 50 Deluxe 50 Cent, Jeff O'Connell, 2012-12-27 Get fit like 50 Cent: The phenomenally fit superstar rapper reveals his strategic six-week workout plan for achieving a ripped body—and developing the mental toughness to stay in shape for a lifetime. Survival is a recurring theme of 50 Cent's lyrics, and his life. That's why, with obesity rates soaring and fitness levels declining, he wants to give everyone an all-access pass to his premium plan for lifelong fitness. In *Formula 50*, the mega-successful entertainer and entrepreneur unleashes the power of metabolic resistance training (MRT), the key ingredient that has helped him achieve the famously buff physique that makes his music videos sizzle. Through MRT, 50 Cent's fitness plan breaks down the barriers between traditional weight training and cardio workouts, accelerating fat loss while building muscle and improving overall fitness. Designed for a six-week rollout for total mind-body transformation, the *Formula 50* regimen builds willpower while it builds physical power. In addition to motivation, nutrition is another key element; readers will discover the unique dietary combinations that fuel 50 Cent's workouts. Now, view never-before-seen footage with the *Formula 50 deluxe* edition e-book. Get up close and personal with 50 as he explains his book and its promise to you, and see exclusive behind-the-scenes video of 50 in the gym. Coauthored with Jeff O'Connell, health journalist and editor-in-chief at *Bodybuilding.com* (the world's largest fitness website), the book delivers a payoff that goes beyond six-pack abs and flab-free pecs: This is a fitness plan that boosts energy, endurance, flexibility, and mobility. The result is a body you've always dreamed of—and the mindset to attain the rest of your dreams.

hiit workout music 60 20: Advanced Fitness Assessment and Exercise Prescription Ann L. Gibson, Dale R. Wagner, Vivian H. Heyward, 2024-02-01 *Advanced Fitness Assessment and Exercise Prescription*, Ninth Edition With HKPropel Online Video, is the definitive resource for conducting physical fitness testing and customizing exercise programs. Now in its ninth edition, this comprehensive guide is fully updated with the latest research, the newest exercise testing and prescription guidelines, and the most up-to-date programming content. The text reflects the most recent exercise testing and prescription guidelines from the American College of Sports Medicine (ACSM), along with physical activity recommendations from the U.S. government and American Heart Association. It highlights ACSM guidelines for physical activity and exercise testing

requirements to consider before beginning exercise programs. Combining important research with practical application of testing and prescription protocols, the ninth edition also features the following: A new full-color interior to provide more detail and understanding of concepts through photos and figures New step-by-step assessment sidebars that make it easy to locate and refer to assessment procedures Modern guidelines for usage of current technology to test and monitor physical activity Demonstrations of many of the assessments and exercises, provided in 73 video clips Structured around the five physical fitness components—cardiorespiratory capacity, muscular fitness, body composition, flexibility, and balance—the text begins with an overview of physical activity, health, and chronic disease, including discussion of preliminary health screenings and risk classification. Readers will gain insight into field and laboratory assessments and testing protocols for each component, along with detailed information on properly administering the most common assessments. The 73 related video clips, delivered online through HKPropel, provide detailed instruction and demonstration for performing many of the assessments and exercises; these include functional movement assessment, pull-up and push-up testing, flywheel training, and more. Finally, readers will turn research into practice by understanding how to design personalized exercise prescription, customized for each client based on individual assessment outcomes. Information on appropriate training methods and programming considerations are presented for each component of fitness. With an unparalleled depth of coverage and clearly outlined approach, *Advanced Fitness Assessment and Exercise Prescription* bridges the gap between research and practice for students and exercise professionals alike who are eager to increase their knowledge and skill in assessing elements of fitness and designing individualized exercise programs. Earn continuing education credits/units! A continuing education exam that uses this book is also available. It may be purchased separately or as part of a package that includes both the book and exam. Note: A code for accessing online videos is not included with this ebook but may be purchased separately.

hiit workout music 60 20: HIIT WORKOUT Philippe Jeandey, Qu'est-ce que le HIIT ? Le HIIT est l'acronyme de High-Intensity Interval Training en anglais, cet entraînement fractionné de haute-intensité désigne tous les entraînements alternant périodes d'efforts courts et intenses et périodes de récupération active ou de repos total (par exemple sprinter pendant 30 secondes et marcher pendant 1 minute). Il existe de nombreuses façons de structurer son entraînement de HIIT avec des phases d'exercices et de récupérations plus ou moins longues. Il n'y a pas de formule précise mais il existe plusieurs protocoles dont : • La méthode Tabata est un entraînement de 4 minutes composé de 8 cycles de 20 secondes d'effort intense et 10 secondes de repos. • La méthode Little est un entraînement de 18 ou 27 minutes composé de 8 ou 12 cycles de 60 secondes d'effort soutenu et 75 secondes de repos. • Le protocole 8/12 est un entraînement de 20 minutes composé de 60 cycles de 8 secondes de sprint et 12 secondes de repos. Si il n'y a pas de formule définie, on retrouve souvent dans la pratique des sessions de HIIT avec un rapport de 2 pour 1 entre travail et repos. Personnellement, je ne dépasse jamais plus de 30 secondes de période d'effort car je trouve difficile de maintenir un effort maximum et constant pendant des périodes plus longues. Il existe également une variation de HIIT, le HICT (High Interval Circuit Training), avec des répétitions plutôt que des intervalles de temps. C'est un circuit continu d'exercices sans période de repos ou avec une courte période de récupération entre les tours. Certains entraînements de CrossFit sont basés sur ce principe.
