Classic Mat Pilates Exercises

Mat Pilates forms the core of the practice, relying on body weight and precise control to build strength and flexibility. These exercises are accessible and can be performed almost anywhere, making them a popular choice for many. The names often describe the movement or the primary focus of the exercise.

The Hundred

The Hundred is often the first exercise introduced in a Pilates session and is a powerful precursor to more advanced movements. It is designed to warm up the body, improve circulation, and build endurance in the deep abdominal muscles. The exercise involves lying on your back with your legs lifted to tabletop position, your head and shoulders curled off the mat, and your arms pumping vigorously by your sides. The goal is to maintain a stable torso while performing 100 small, rapid arm pumps, inhaling for five pumps and exhaling for five pumps.

Roll Up

The Roll Up is a challenging yet highly rewarding exercise that targets the abdominal muscles and spinal articulation. It requires significant core strength and control to sequentially articulate the spine from a lying position to a seated forward fold, and then back down with control. The movement emphasizes lengthening the spine and engaging the deep abdominal muscles throughout the entire range of motion. Proper execution prevents momentum from taking over, ensuring the work is done by the targeted musculature.

Single Leg Circles

Single Leg Circles are designed to mobilize the hip joint and strengthen the core while maintaining pelvic stability. Performed on the back, one leg is extended towards the ceiling, and small, controlled circles are traced with the foot. The focus is on keeping the pelvis perfectly still, isolating the movement to the hip and leg. These circles can be performed both clockwise and counter-clockwise to work the hip in all planes of motion, promoting joint health and flexibility.

Rolling Like a Ball

This exercise is a delightful and effective way to engage the core, improve spinal articulation, and create a gentle massage for the spine. From a seated position, knees are drawn towards the chest, hands grasp the shins, and the body is rounded into a ball shape. The exercise involves rolling backward along the length of the spine to the shoulder blades and then returning to the starting position, all while maintaining the rounded shape and preventing the heels from touching the mat. It requires balance and core control to avoid falling backward.

Single Leg Stretch

The Single Leg Stretch is a fundamental exercise for developing abdominal strength and coordination. Lying on the back, one leg is drawn into the chest while the other is extended straight out. The hands cradle the shin of the bent leg, and the torso is curled forward. The exercise involves switching legs in a cycling motion, maintaining the abdominal curl throughout. This movement targets the rectus abdominis and obliques, improving core endurance and leg-to-core connection.

Double Leg Stretch

Building on the Single Leg Stretch, the Double Leg Stretch increases the challenge by engaging both legs simultaneously. From the same starting position with the torso curled, both legs are extended out while the arms sweep overhead. Then, the legs are drawn back in and the arms return to cradle the shins. This dynamic movement enhances abdominal strength, coordination, and breath control, requiring significant stabilization from the deep core muscles.

Scissors

The Scissors exercise is an excellent way to build strength in the hamstrings and glutes while challenging the abdominal muscles. Lying on the back with the legs lifted to tabletop, one leg is extended towards the ceiling, and the other is extended forward. The hands cradle the hamstring of the vertical leg, and the torso remains in an abdominal curl. The legs then switch positions in a scissoring motion, with a focus on

controlled movement and maintaining core engagement. It works on hamstring flexibility and lower abdominal strength.

Shoulder Bridge

The Shoulder Bridge is a fantastic exercise for strengthening the posterior chain, including the glutes, hamstrings, and back muscles, while also improving spinal mobility. Lying on the back with knees bent and feet flat on the floor, the hips are lifted to create a straight line from the shoulders to the knees. The focus is on engaging the glutes and lifting the hips high, while maintaining a stable and neutral spine. This exercise also promotes thoracic extension and shoulder mobility.

Spine Stretch Forward

Spine Stretch Forward is a mat exercise that focuses on lengthening the spine and stretching the hamstrings and the back muscles. Sitting with legs extended straight and wide apart, the arms are extended forward. The exercise involves articulating the spine forward, reaching the chest towards the floor while maintaining a long, straight spine. The breath is integral, with an exhale used to deepen the stretch. It's a challenging pose that requires significant hamstring flexibility and abdominal control to prevent the back from rounding excessively.

Saw

The Saw exercise is a rotational movement designed to increase spinal mobility and oblique strength. Sitting with legs extended straight and relatively wide, the arms are extended to the sides. The exercise involves twisting the torso from the waist, reaching one arm across the body towards the opposite foot, as if sawing. The other arm reaches back. The focus is on maintaining upright posture and rotating from the spine, not the hips. This promotes spinal rotation and strengthens the core muscles responsible for stabilizing the trunk.

Swan Dive

The Swan Dive is a challenging back extension exercise that strengthens the back muscles, glutes, and shoulders while promoting spinal extension and flexibility. Lying face down, the hands are placed under the shoulders, and the chest is lifted off the mat in an arched position. The legs extend back, and the body performs a controlled "swan dive" motion, moving forward and then backward, using the back and gluteal muscles to initiate the movement. This exercise is crucial for improving posture and counteracting the effects of prolonged sitting.

Half Teaser

The Half Teaser is a preparatory exercise for the full Teaser, focusing on building core strength and control for spinal flexion. Lying on the back, the knees are drawn into the chest, and the arms are extended overhead. The exercise involves lifting the head, shoulders, and torso off the mat while simultaneously extending the legs forward and up to a 45-degree angle. The goal is to hold this position, engaging the abdominals, before slowly returning to the starting position. It requires significant abdominal strength and coordination.

Pilates Reformer Exercises

The Pilates Reformer is a sophisticated piece of equipment that uses a system of springs and pulleys to provide resistance and support. This allows for a wider range of exercises and can offer modifications for different fitness levels. Reformer exercises often have names that describe the action or the resistance provided by the springs.

Footwork

Footwork is the foundational series of exercises performed on the Reformer, designed to warm up the entire body, improve alignment, and build strength in the legs and glutes. The exercise involves lying on the carriage with feet positioned on the footbar, and pushing the carriage out against spring resistance, then controlling its return. Various foot placements, such as heels, toes, and arches, are used to target different muscle groups and improve foot and ankle articulation.

The Series of Five

The Series of Five is a progression of classic Reformer exercises that build upon the principles of Footwork, increasing the challenge and targeting specific muscle groups. These exercises typically include exercises like Short Spine, Long Spine, Elephant, and Leg Springs, each with unique movements that demand core engagement, balance, and controlled resistance. They are designed to integrate the entire body and improve overall strength and coordination.

Long Spine

Long Spine is a Reformer exercise that emphasizes spinal articulation and lengthening, particularly through the thoracic spine. Performed in a kneeling position on the Reformer carriage, the practitioner reaches forward, articulating the spine from the thoracic region to lengthen and create space between the vertebrae. The springs provide resistance that helps to control the movement and build strength in the back extensors. It is a challenging exercise that promotes thoracic mobility and proprioception.

Short Spine

Short Spine is a Reformer exercise that is the inverse of Long Spine, focusing on spinal flexion and articulation from the lumbar spine. In a kneeling position, the practitioner curls the spine forward, drawing the navel towards the spine and lengthening the waist. The springs provide assistance to the movement, allowing for a deep flexion and stretch through the posterior chain. This exercise builds core strength and improves the ability to articulate the spine.

Elephant

The Elephant is a Reformer exercise that strengthens the arms, shoulders, and core while promoting spinal extension and alignment. Performed in a kneeling position on the carriage, the practitioner extends the legs back and presses the carriage out by pushing through the hands and balls of the feet, creating a stable plank-like position. The focus is on maintaining a long spine and engaging the abdominal muscles. The springs provide resistance that challenges the upper body and core stabilization.

Leg Springs

Leg Springs are a series of exercises performed on the Reformer that target the legs, hips, and glutes with resistance. These exercises involve lying on the Reformer carriage and using a leg spring attached to the footbar to perform various leg movements, such as circles, extensions, and lifts. The springs provide a controlled resistance that strengthens the muscles of the legs and hips while also promoting flexibility and range of motion.

Hundred on the Reformer

The Hundred on the Reformer adapts the classic mat exercise to the apparatus, offering added resistance and support. Performed seated on the carriage, the practitioner curls the torso forward while pumping the arms, similar to the mat version. The carriage may move slightly, adding an element of instability that further challenges the core muscles. The springs provide a gentle resistance that aids in maintaining the proper posture and breath pattern.

Chest Expansion

Chest Expansion is a Reformer exercise designed to open the chest, strengthen the upper back, and improve posture. Performed seated, the practitioner holds onto straps or handles and pulls them back, squeezing the shoulder blades together. The focus is on expanding the chest and creating a feeling of openness across the front of the body. This exercise counteracts the rounded posture often associated with modern lifestyles.

Up Stretch

The Up Stretch is a dynamic Reformer exercise that builds strength and coordination in the legs, core, and arms. Performed in a kneeling position with hands on the footbar and feet against the shoulder rests, the practitioner pushes the carriage out while simultaneously lifting the hips and extending the legs. The exercise involves a controlled return, building strength through the entire body. It requires significant core stability and leg strength to execute effectively.

Pilates Cadillac/Trapeze Table Exercises

The Cadillac, also known as the Trapeze Table, is a highly versatile apparatus featuring a frame with a trapeze, springs, and bars. It allows for a wide range of exercises, from gentle stretching to challenging strength work, often involving hanging or inverted movements.

Roll Down

The Roll Down on the Cadillac is an exercise that emphasizes spinal articulation and core control. Performed seated on the Cadillac with the feet secured, the practitioner slowly rolls the spine down towards the mat, engaging the abdominal muscles to control the descent. The springs provide assistance, allowing for a deeper stretch and a more controlled movement than on the mat. This exercise helps to build abdominal strength and lengthen the spine.

Leg Pull Front

Leg Pull Front is a challenging exercise on the Cadillac that builds strength in the abdominals, shoulders, and arms. Performed in a plank-like position with the feet secured in the leg springs, the practitioner lifts the legs and body into a straight line, engaging the core to stabilize. The exercise involves pulling the legs towards the body and then extending them back out, all while maintaining a strong and stable torso. It requires significant core strength and control.

Leg Pull Back

Leg Pull Back is the posterior counterpart to Leg Pull Front, focusing on strengthening the glutes, hamstrings, and back muscles. Performed in a prone position on the Cadillac, with the feet in the leg springs, the practitioner lifts the legs and extends them back. The exercise involves pulling the legs forward towards the body and then extending them back, using the posterior chain to control the movement. This exercise builds strength and endurance in the back of the body.

Pigeon

The Pigeon exercise on the Cadillac offers a deep stretch for the hips and hamstrings. Performed in a seated position with one leg extended and the other bent, the practitioner uses the Cadillac's arm bars and springs to deepen the stretch. The exercise involves leaning forward and drawing the bent leg closer to the chest, while the springs provide gentle resistance to facilitate the release in the hip flexors and rotators. It is a powerful stretch for improving hip mobility.

Pull Straps

Pull Straps are a series of exercises on the Cadillac that utilize arm and leg straps attached to overhead springs. These exercises can target a wide range of muscle groups, including the arms, shoulders, back, chest, and legs, depending on the strap placement and movement performed. Examples include pulling the straps down towards the chest to work the back muscles, or extending them overhead to engage the triceps and shoulders. The springs provide adjustable resistance for a progressive workout.

Swan

The Swan on the Cadillac is an advanced back extension exercise that builds on the mat version by utilizing the resistance of the springs to deepen the range of motion. Performed in a prone position, the practitioner arches the spine upwards, using the springs to assist in the extension. This exercise strengthens the back muscles, glutes, and shoulders while promoting thoracic mobility and counteracting rounded posture. It requires significant core control and spinal awareness.

Pilates Chair Exercises

The Pilates Chair, also known as the Wunda Chair, is a compact yet powerful piece of equipment that uses a spring-loaded seat and a pedal. It allows for a variety of exercises that challenge balance, strength, and coordination.

Perching

Perching is a fundamental Chair exercise that builds lower body strength, balance, and core stability. Performed seated on the edge of the chair with feet on the pedal, the practitioner presses the pedal down and then rises to a perching position on the edge of the seat, engaging the glutes and quads. The springs provide resistance throughout the movement, challenging the muscles to control the descent and ascent. It improves ankle stability and proprioception.

Up/Down

The Up/Down exercise on the Chair is a dynamic movement that strengthens the legs, glutes, and core while improving balance. Performed with hands on the handles and feet on the pedal, the practitioner presses the pedal down, extending the legs and lifting the body into a standing or perching position. Then, they slowly return to the starting position, controlling the resistance of the springs. This exercise builds endurance and power in the lower body.

Back Bow

Back Bow is a spinal extension exercise performed on the Chair that strengthens the back muscles and improves posture. Performed kneeling or seated, the practitioner leans back, arching the spine while holding onto the chair handles. The springs provide resistance that challenges the back extensors and glutes to control the movement and return to an upright position. It helps to open the chest and counteract forward rounding of the spine.

Leg Press

The Leg Press on the Chair is an exercise that focuses on building strength and endurance in the quadriceps, hamstrings, and glutes. Performed seated with feet on the pedal, the practitioner presses the pedal away from the body, extending the legs against the resistance of the springs. The focus is on controlled movement and maintaining a stable torso. This exercise can also be modified to target different leg muscles through variations in foot placement.

Pilates Barrel Exercises

Pilates Barrels, such as the Ladder Barrel and the Spine Corrector, are curved apparatuses designed to provide support and challenge for spinal articulation, stretching, and strengthening exercises.

Short Box to Up Stretch

This exercise, often performed on the Cadillac or Reformer with a Short Box, combines the seated spinal articulation of reaching over the box with the dynamic leg and core work of the Up Stretch. It challenges the core to stabilize while the limbs move, promoting a full-body integration and building strength throughout the torso and extremities. The box provides support for spinal extension and flexion, while the springs add resistance for leg work.

Side Bend

The Side Bend exercise on a barrel, typically the Ladder Barrel, focuses on strengthening the obliques and improving lateral spinal flexion. Performed seated or kneeling on the barrel, the practitioner reaches one arm overhead and bends laterally, elongating one side of the torso while contracting the other. The barrel provides support and a unique angle that challenges the stabilizing muscles of the core and the muscles of the lateral trunk. It promotes spinal mobility and core strength.

Back Extension

Back Extension on a barrel, particularly the Spine Corrector or Ladder Barrel, is designed to strengthen the back extensors and improve spinal extension. Performed prone over the curve of the barrel, the practitioner lifts the chest and extends the spine against the resistance of the springs or body weight. This exercise helps to counteract the effects of slouching, promoting a more upright posture and strengthening the muscles that support the spine. It also increases mobility in the thoracic spine.

names of pilates exercises: Stronger Than Yesterday Kanika Pandey, 2022-07-12

In 2003, my mum got a call. “Your daughter Kanika is no more. She died in a road accident.” She traveled 36 hours to reach Gorakhpur (Eastern India) to find me in a public hospital battling between life and death. Little did she know that her girl would become a master's athlete for Olympic weightlifting in Australia one day. My weightlifting journey started when I turned 35, an age at which many would stop doing any exercise and a period when strength training in older women was unpopular. It helped me find the balance between work and life. It helped me fix my posture and poor sleep habits. It helped me fight a challenging phase during 2021 and find tips that I use each day running a busy life just like yours. This book aims at inspiring you to drive a change in your life to bring your health to the front and center of your daily habits. The book allows you a framework to assess your current lifestyle and start a journey towards a solution through my lived experience. The tips available in the book are simple for anyone to adopt and make a change. The book also includes interviews with two athletes, Brandon Swan (Crossfit) and Olympian Brandon Wakeling, that will help you learn from the best in the sport I love, i.e., weightlifting! Hopefully, my journey can help you write a new chapter in your own life soon and find a healthier version of yourself that is stronger than yesterday.
